

**Pulmonaria**  
**Simplified standard protocol: SSP/BLK/1**

Examination office:	Naktuinbouw	
Reference of the protocol:	SSP/BLK/1	
Date of preparation of the protocol:	27/05/2022	
Date of entry into force of the protocol:	01/04/2023	
Botanical taxon:	Pulmonaria L.	
Common Name (when known):	Jerusalem cowslip	
Way of propagation of the plants to be examined:	Self or cross pollinated seed propagated <input type="checkbox"/> Vegetatively propagated <input checked="" type="checkbox"/>	
Number of growing cycles:	1 <input checked="" type="checkbox"/> 2 <input type="checkbox"/> Other <input type="checkbox"/> specify <a href="#">Click or tap here to enter text.</a>	
List of grouping characteristics:	Yes <input type="checkbox"/> if yes put as annex No <input checked="" type="checkbox"/>	
Minimum number of plants in trial:	Vegetative:20	Seed: -
Minimum number of plants observed by measuring or counting:	Vegetative:1	Seed: -
Give description of when observations should take place:	-	
<p>Uniformity:</p> <ul style="list-style-type: none"> <li>- For the assessment of uniformity of vegetatively propagated, self-pollinated seed propagated varieties or F1-hybrids, a population standard of 1 % and an acceptance probability of at least 95% should be applied. In the case of a sample size of 20 plants, 1 off-types is allowed.</li> <li>- For the assessment of uniformity for cross-pollinated varieties, the recommendations for cross-pollinated varieties in the General introduction of UPOV should be applied. The variability within the variety should not exceed the variability of comparable varieties already known.</li> </ul>		
Table of characteristics:	Present <input type="checkbox"/>	

	Not available <input checked="" type="checkbox"/>
Literature: (when present, please annex to this document)	Present <input type="checkbox"/> Absent <input checked="" type="checkbox"/>
