# Olearia
## <u>Simplified standard protocol: SSP/OLE/1</u>

| | |
|---|---|
| Examination office: | Naktuinbouw |
| Reference of the protocol: | SSP/OLE/1 |
| Date of preparation of the protocol: | 11/08/2022 |
| Date of entry into force of the protocol: | 01/04/2023 |
| Botanical taxon: | Olearia phlogopappa (Labill.) DC. |
| Common Name (when known): | Tasmanian daisybush |
| Way of propagation of the plants to be examined: | Self or cross pollinated seed propagated ☐<br><br>Vegetatively propagated ☒ |
| Number of growing cycles: | 1 ☒<br>2 ☐<br>Other ☐ specify Click or tap here to enter text. |
| List of grouping characteristics: | Yes ☐ if yes put as annex<br>No ☒ |

| | | |
|---|---|---|
| Minimum number of plants in trial: | Vegetative:20 | Seed: - |
| Minimum number of plants observed by measuring or counting: | Vegetative:1 | Seed: - |
| Give description of when observations should take place: | - | |

Uniformity:

- For the assessment of uniformity of vegetatively propagated, self-pollinated seed propagated varieties or F1-hybrids, a population standard of 1 % and an acceptance probability of at least 95% should be applied. In the case of a sample size of 20 plants, 1 off-types is allowed.

- For the assessment of uniformity for cross-pollinated varieties, the recommendations for cross-pollinated varieties in the General introduction of UPOV should be applied. The variability within the variety should not exceed the variability of comparable varieties already known.
